Training Provision

Change Control Process PCP 03 and Reporting Requirements PCP13
Contractual Issues Training to CT 05 (PBIs)

Caski's Experience

Caski personnel have written and operated change control procedures for use with NDA contracts. They have been part of the change control boards assessing changes from both a technical and commercial perspective.

Caski can also provide change board secretarial services ensuring that the required documentation is presented to the board, decisions recorded and the stakeholders kept up to date with progress.

Caski personnel have operated as Commercial Managers on Nuclear sites presenting changes to the customer on behalf of the site manager and providing additional information where required. In this role they are also experienced in negotiating additional fee as part of demonstrating that the change is in the customer's interest. Caski's work management experience ensures that once approved the change is monitored to completion including signing off final documentation.

Caski's Philosophy

Caski has grown and prospered by providing a service to our client base which is characterised by delivery, value and above all safety. Our customers are in highly regulated industries requiring careful attention to detail, provision of auditable trails and documentation of the highest standards.

Staff and associates with Caski share the same aim - bringing the benefit to the customer. This is achieved through developing a partnership with the business, ensuring sound justification for the work and staying with the organisation to realise the benefit from the investment.

Our staff have significant experience across a number of industries both nationally and internationally. Access to resources like these means we can provide a range of skills meeting the customer's requirements throughout the project. By our very nature we are a flexible organisation and can adjust our approach to meet and manage your ongoing issues.
